

Sambit Das

Kolkata, West Bengal, India | sambit.official2006@gmail.com | LinkedIn | GitHub | X / Twitter

Summary

Computer Science undergraduate specializing in **AI/ML integration** and **full-stack development**, with hands-on experience building blockchain smart contracts and immersive web platforms at university hackathons. Strong communicator with a background in structured public-speaking and team collaboration.

Education

Techno India University

Bachelor of Technology (B.Tech) in Computer Science and Engineering

Kolkata, West Bengal, India

Aug 2024 – Jul 2028

Ramakrishna Mission

Schooling; Communication Distinction

West Bengal, India

Mar 2012 – Feb 2022

Technical Skills

Languages: Python, Rust, TypeScript, JavaScript, HTML/CSS

AI/ML: OpenAI API, Google Gemini API, LangChain, Retrieval-Augmented Generation (RAG), TensorFlow, PyTorch, NumPy, Pandas

Blockchain/Web3: Soroban SDK, Stellar Blockchain, Smart Contract Development

Tools & Platforms: Git, GitHub, VS Code, REST APIs

Professional Skills: Verbal & Written Communication, Public Speaking, Team Collaboration, Technical Presentation

Projects

Sports Betting Platform – Soroban Smart Contract | *Rust, Soroban SDK, Stellar Blockchain* Stellar Buildathon

- Built a decentralized sports-betting smart contract on the Stellar network using Soroban (Rust), enabling users to place bets on match outcomes without a centralized authority.
- Designed on-chain data structures to record individual user bets, match selections, and stake amounts transparently and immutably.
- Implemented contract logic for admin-driven winner declaration and secure reward-claim functionality for successful bettors.
- Deployed and verified the contract on the Stellar testnet, demonstrating a working decentralized betting flow end-to-end.

Sanskriti-Flow – Hyper-Local Immersive E-Commerce Platform | *Full-Stack Web Concept*InnovateX, MAKAUT

- Conceptualized and designed a platform connecting rural Bengali artisans (weavers, potters) directly with global buyers, removing middlemen from the traditional supply chain.
- Proposed an “Immersive Storytelling” product-discovery experience to let buyers engage with each artisan’s craft, heritage, and process before purchase.
- Presented the platform architecture and market rationale at InnovateX, a hackathon hosted by MAKAUT, articulating the solution to judges and peers.

Communication & Leadership

Earned a Communication distinction through a decade-long schooling program at Ramakrishna Mission, reflecting sustained development in public speaking and interpersonal communication.

Regularly presents technical projects and pitches at university hackathons, translating complex technical concepts (blockchain, AI) for non-technical audiences.
